

Spokane Regional Office — Spokane, WA

Revised July 2016

Forage Production

Idaho, Oregon, and Washington

Crop Insured

Forage production is insurable in a county if:

- A premium rate is provided for the type in the actuarial documents;
- You have a share in the crop; and
- Grown after the establishment year.

Counties Available

Idaho - Benewah, Boundary, Kootenai, Teton, and Twin Falls counties.

Oregon - Klamath and Malheur counties.

Washington - Pend Oreille, Spokane, and Stevens counties.

Causes of Loss

You are protected against the following:

- Adverse weather conditions such as hail, frost, freeze, wind, drought, and excess moisture;
- Earthquake;
- Failure of irrigation water supply, if caused by an insured peril during the insurance period;
- Fire, if caused by an insured peril during the insurance period;
- Insects, but not damage due to insufficient or improper application of control measures;
- Plant disease, but not damage due to insufficient or improper application of control measures;
- Volcanic eruption; or
- Wildlife.

Damage that occurs after removal from the windrow is not insurable.

Insurance Period

Insurance begins on acreage with an adequate stand on the later of:

- The day we accept your application;
- October 16; or
- April 15 of the year after the year of establishment (spring-seeded acreage only).

Insurance ends with the earliest of one of the following:

- Total destruction of the forage crop;
- Removal from the windrow or the field for each cutting;
- Final adjustment of the loss;
- Abandonment of the forage crop;
- The date grazing starts on the forage crop; or
- October 15.

Insurance coverage continues for acreage that is grazed after it has gone into winter dormancy. Winter dormancy is defined as the suspension of growth and development of the forage plants during the fall and winter months. You must remove all livestock from insured fields before the forage emerges from winter dormancy.

Acreage Report

You must report to your crop insurance agent all of the acreage of the insured crop within the county in which you have a share at the time insurance coverage begins.

Important Dates

Sales Closing September 30, 2016
Insurance Attaches October 16, 2016
Acreage Report Date December 15, 2016

For new spring-seeded acreage, a revised acreage report may be submitted until July 15.

Practices and Types

Irrigated practices are insurable in all counties listed. Non-irrigated practices are also available in select counties.

The alfalfa type is insurable in all counties. The grass-alfalfa, alfalfa-grass, timothy, and orchardgrass types are insurable in select counties.

If a type or practice is not listed as insurable in your

county, talk to your crop insurance agent about requesting coverage by written agreement.

Adequate Stand

Please contact your crop insurance agent to get adequate stand requirements applicable to your practice and types grown.

Production Reporting

Talk to your crop insurance agent for special reporting instructions if you plan to use your production on the farm (for example, livestock feed).

Coverage Level and Price Election

You can choose a percentage of your approved average yield, from 50 percent to 75 percent. The price election is the price you receive if you suffer a loss. Choices vary by coverage level. Please check with your crop insurance agent for price election changes for this crop year.

Catastrophic Coverage

Catastrophic Risk Protection (CAT) coverage is available at 50 percent of your actual production history (APH) yield and 55 percent of the established price election. The total cost for CAT coverage is an administrative fee of \$300 per crop per county.

Replant, Late, or Prevented Planting Payments

Not available on forage production policies.

Excluded Coverage

The policy does not insure any acreage:

- That does not have an adequate stand at the beginning of the insurance period;
- That is grown with a non-forage crop; or
- Where the farming practices carried out on the insured acreage do not follow or comply with established good farming practices for your area.

Loss Example

Assume a 65-percent coverage level, a 100-percent price election of \$163 per ton, and an average yield of 4 tons per acre.

$$\begin{array}{r} 4 \text{ Tons per acre (APH)} \\ \times 0.65 \text{ Percent coverage level} \end{array}$$

$$\begin{array}{r} 2.6 \text{ Tons per acre guarantee} \\ - 1.3 \text{ Harvested tons per acre production} \\ \hline 1.3 \text{ Tons per acre loss} \\ \times \$163 \text{ Price election} \\ \hline \$212 \text{ Indemnity payment per acre} \end{array}$$

Where to Buy Crop Insurance

All multi-peril crop insurance, including CAT policies, are available from private crop insurance agents. A list of crop insurance agents is available at all USDA service centers and on the RMA website: www.rma.usda.gov/tools/agent.html.
