Question	Answer
What is Ineligible Tracking?	Ineligible Tracking System (ITS) contains records submitted to it primarily by Approved Insurance Providers (AIPs) for persons who are not eligible to participate in any crop insurance programs insured or reinsured by Federal Crop Insurance Corporation (FCIC) administered under the Federal Crop Insurance Act (Act). The Risk Management Agency (RMA) maintains the ITS to aid AIPs in identifying ineligible persons. ITS may not contain the names of all ineligible persons; however, that does not change the ineligible status for such person(s). Federal crop insurance coverage is not available to these persons until their eligibility is reinstated in accordance with applicable policy provisions and regulations.
How will this be used for 2011?	For 2011, the Ineligible Tracking Records, Ineligible Producer Input Record, T60, Ineligible Producer Error Record, T60e, Ineligible Producer Output Record, T61 and CAT Fee Receivable Record, T65 will remain in the legacy format and should be transmitted and deposited on the Legacy FTP server in the same manner used for Reinsurance Year 2010. Once the Ineligible Tracking records are on the server, the Legacy Bridges application will pick up the data, process it and transmit it to the PASS system as required. The PASS system will make any necessary updates and the Legacy Bridges application will return those values to the AIP's through the FTP following the same methodology used by DAS in 2010.
What are the record changes for 2011?	For 2011 the Ineligible Tracking records will not be changing. The records will be maintained and used in the same format as published in the 2010 Appendix III.
What are the ITS Rules for 2011?	Rules for using the ITS System for Reinsurance Year 2011 are contained in the 2008 Ineligible Tracking System Handbook found at the link below: http://www.rma.usda.gov/handbooks/24000/index.html All rules regulations and conditions applicable to the Ineligible Tracking System for 2011 can be found in this document and will apply to the records/files sent to the Legacy FTP server.

Question	Answer
What will be the filename format for transmitting the ITS records to the FTP server in 2011?	The file names used to transmit the Ineligible Tracking System records to DAS in 2010 will be retained and accepted when the files are placed on the FTP server for 2011. No name changes are required.
Will the ITS records ever be converted to ITM and if so when?	Since the Ineligible Tracking System was not included in the scheduled Development for the first phase of the ITM project, it has been determined that the most efficient manner for handling the Ineligible Tracking System record types in 2011 is for the AIP's to continue to submit and receive this information in the same manner as used in 2010. That is the record types will remain as in the 2010, fixed length format, and the files will be received and transmitted via the Legacy AIP FTP Server. When ITS is incorporated into the ITM schedule, the ITS System and its associated records will be converted into the current Appendix III format as required for processing in the PASS/ITM System.
