INFORMATIONAL MEMORANDUM

TO: All Approved Insurance Providers Writing in the State of Missouri

FROM: Collin Olsen /s/ *Collin Olsen*
Director, Topeka RO

SUBJECT: Actuarial Rates Resulting from Breached Levees in Missouri

I. BACKGROUND

Due to the 2019 flood event, levees along the Missouri and Mississippi Rivers and tributaries in Missouri were breached. The following is a 2020 crop year policy provision ("Breached Levee Statement") in the Special Provisions for spring planted crops with a 11/30 filing date:

"Land flooded due to a breach in a levee resulting from prior year(s) flooding is insurable. The applicable rate will be assigned based on conditions of the levee and soils on the latter of the sales closing date or earliest planting date. If, by that date, the levee has not been repaired to prior specifications, or if damaged soil (if any) has not been restored to at least the same crop yield potential as prior to the flood event, the land will be classified as high-risk and will have the highest rate classification in the county. However, if the levee is repaired to prior design specifications, and the soil has at least the same crop yield potential as before the flood, the land will be classified as shown on the current crop year Actuarial Map. If the levee has been temporarily or permanently repaired, but not to prior design specifications, by the latter of the sales closing date or earliest planting date, and the soil has at least the same crop yield potential as before the flood, then RMA may adjust the rate to an amount consistent with the level of flood risk by written agreement, if applicable. For RMA to consider any levee repair, RMA must be provided a certification from the U.S. Army Corps of Engineers or signed and sealed certification from a professional engineer who is currently licensed and registered in the state where the levee is located. For soils to be considered restored to the same crop yield potential as before the flood, you must sign a statement that damaged soil (if any) has been restored to at least the same crop yield potential as prior to the flood event."

II. COUNTIES AFFECTED

The breached levee statement was placed in the Special Provisions in the following Missouri counties: Atchison, Boone, Buchanan, Callaway, Carroll, Chariton, Clark, Cole, Cooper, Franklin, Gasconade, Holt, Howard, Jackson, Lewis, Lincoln, Marion, Moniteau, Osage, Pike, Platte, Ray, Saline, St Charles, St. Genevieve, St Louis County, and Warren.

III. CERTIFICATION REQUIREMENTS

The breached levee statement requires breached levee system repairs to be certified. For levee systems within the U.S. Army Corps of Engineers (USACE) jurisdiction, the Topeka Regional Office (TRO) should be able to obtain the necessary certification of repairs from USACE. For all other breached levee system, the TRO must be provided a signed and sealed certification from a professional engineer who is currently licensed and registered in the state where the levee is located. Failure to provide the Topeka Regional Office with the necessary certification will mean the breached levee statement will be applicable to the acreage flooded by a breach in that levee system.

The certification of levee system repair is only to address the breaches of the levee system. “Levee system repairs” means all the breaches in the levee system have been repaired. The certification should include the following information:

- i. The levee system name and location
- ii. The levee system has been repaired to prior specification (Y/N)
- iii. The levee system has been repaired to a temporary/permanent level of protection, but not to prior specifications (Y/N)
- iv. The date the levee system was repaired.
- v. If temporary/permanent level of protection, but not to prior specifications, please provide the minimum overtopping height (in feet based on river gage station) of the repaired levee system. Please provide Gage Height (in feet) of minimum overtopping height and Gage Name

IV. STATUS OF BREACHED LEVEES AS OF FEBRUARY 26, 2020

The following levees listed in subsection A, B, C is not a comprehensive listing of breached levees. The breach levee statement applies to all breached levees in the affected counties. There may be additional levees in the affected counties identified in Section II that may have breached. You may contact the Topeka Regional Office at rsoks@usda.gov, or 785-228-5512, to report a breached levee not identified in Section IV A, B, or C.

A. Certified Repaired to Prior Specifications

As of	Levee Name	County
1/22/20	Pike Grain #3	Pike
1/31/20	Kissinger	Pike
1/31/20	Foley, Cap Au Gris, Winfield	Lincoln
1/31/20	Winfield Pin Oak	Lincoln
2/21/20	Big Bend Levee	Carroll
2/25/20	Hartsburg Levee Section 3	Boone

B. Not Repaired or Not Certified as Repaired (continued)

Levee Name	County
Saline County LD No. 2	Saline
Cole's Lake DD No. 2	Saline
Tuque Creek Levee	Warren

* Previously listed as Private Levee #3, but was updated to Clarence Cannon Wildlife Refuge. Area of impact was updated on the map.

C. Certified Temporarily or Permanently Repaired, but not to Prior Specifications

As of	Levee Name	Gage Hght (ft)	Gage Name	County
1/28/20	Mississippi Fox – Lower	24.8	Gregory Landing	Clark
1/28/20	Mississippi Fox - Upper	25.0	Gregory Landing	Clark
1/28/20	Gregory Drainage District	23.8	Gregory Landing	Clark Lewis
1/28/20	Union Township Levee	24.0	Gregory Landing	Lewis
1/28/20	Marion County DD	25.4	Quincy Lock & Dam 21	Marion
2/3/20	Elm Point	Pre-flood LOP*	Grafton	St Charles

* Based on the certification from the USACE, the Elm Point Levee was temporarily repaired to the Level of Protection (LOP) it was prior to the levee breach. Therefore, for the 2020 crop year, the acreage behind the levee will carry the same map classification and subcounty rate it had prior to the levee breach. Please see the 2020 Actuarial Information Browser for the applicable map classification and subcounty rate

V. ACTION

For crop land affected by a breached levee, the Approved Insurance Provider (AIP) is responsible for ensuring the stipulations in the breached levee statement are followed accordingly.

As noted TRO should be able to obtain the necessary certification of repairs from USACE. For all other breached levee system, the TRO must be provided a signed and sealed certification from a professional engineer who is currently licensed and registered in the state where the levee is located. Insureds, agents or AIPS can provide this information directly by contacting TRO. *Note: TRO only needs to receive one certification that a levee system is repaired to be able to consider that levee system as repaired.*

Actuarial Rates Resulting from Breached Levees in Missouri
February 26, 2020

For more information on the breached levee statement, including “prior specifications,” “damaged soil,” and requesting written agreements, please visit our Frequently Asked Questions document at www.rma.usda.gov/News-Room/Frequently-Asked-Questions/Breached-Levee-Statement.

To assist AIPs, the Topeka RO has developed a map of the land flooded by breached levee (s) identified in this memo. All information can be downloaded from the following: ftp://ftp.rma.usda.gov/pub/Miscellaneous_Files/Breached_Levees/

Disposal: Effective until otherwise superseded or the Special Provisions statement is removed from the counties’ actuarial documents.
