Price Elections

The Commodity Exchange Price Provisions (CEPP) contain information necessary to derive the projected price and the harvest price for the insured crop. The projected price is used to calculate the premium, replant payment, and any prevented planting payment. The harvest price is used to value production-to-count under the Revenue Protection and the Revenue Protection with Harvest Price Exclusion plans. The CEPP includes the price discovery period, release dates, board of trade used, and additional pricing information. The silage harvest price equals the projected price. Contact a crop insurance agent or for more information see the [Price Discovery Tool](#).

Loss Example

Assume corn with an approved yield of 90 bushels per acre, 75 percent coverage level, \$3.96 projected price, \$3.49 harvest price, and 40 bushels produced. For Revenue Protection, the insurance guarantee is equal to the production guarantee multiplied by the greater of the projected price or the harvest price. In this example, the Revenue Protection harvest guarantee is \$267.30 (67.5 bushels per acre guarantee multiplied by \$3.96 projected price).

<u>Yield Protection</u>		<u>Revenue Protection</u>	
	90	Approved yield per acre	90
X	0.75	Coverage level	X 0.75
	67.50	Acre guarantee	67.50
X	\$3.96	Projected price	X \$3.96
	\$267.30	Insurance guarantee	\$267.30
	40	Bushels produced	40
X	\$3.96	Harvest price	X \$3.49
	\$158.40	Production-to-count value	\$139.60
	\$267.30	Insurance guarantee	\$267.30
-	\$158.40	Production-to-count value	- \$139.60
	\$108.90	Indemnity per acre	\$127.70
