Subject

California Prune Counties - 2021 Crop Year Prune Reference Date and Average Dry Count per Pound

### **Background**

This Bulletin establishes the 2021 crop year Prune Reference Date. In addition, it provides Approved Insurance Providers with the average dry prune count per pound for calculating second-period immature prune appraisals.

Each year the Davis Regional Office (DRO) establishes the Prune Reference Date. This date occurs one to two weeks after prune pit tip hardening when 80 to 90 percent of the seed shows the presence of endosperm, a clear jelly-like substance at the bloom end of the seed.

The DRO also annually compiles prune industry data to determine the average dry prune count per pound for second-period immature appraisals. The appraised production to count for second-period immature appraisals uses the average dry

prune count.

## Action

Effective for the 2021 crop year:

1) The Prune Reference Date for all applicable California prune counties for the 2021 crop year is May 4, 2021: and 2) The following tables shall be used to calculate second-period immature appraisals.

<b>County</b>	<b>Dry Prune Count</b>	<b>County</b>	<b>Dry Prune Count</b>
Butte	59	Solano	56
Colusa	57	Sonoma	56
Fresno	61	Sutter	57
Glenn	58	Tehama	57
Madera	61	Tulare	60
Merced	61	Yolo	57
Santa Clara	61	Yuba	58

For counties that insure prunes by written agreement that are not included on this list, contact the DRO for the applicable dry prune count per pound.
